- Larry Suess, DO, PhD, FACN
- Professor; Child Psychiatry
- Touro University Medical Group

DO; Texas College of Osteopathic Medicine,
Fort Worth , TX

PhD; University of Texas
Austin, TX

PGY1-3 Texas Tech Health Science Center, Psychiatry
El Paso, TX

PGY 4-5 University of South Alabama, Child Psychiatry
Mobile, AL

AOA Health Policy Fellow

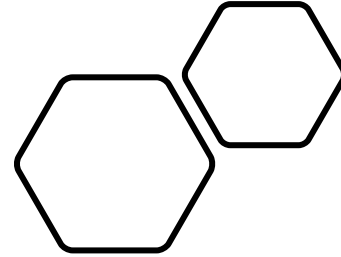

Kentucky Osteopathic
Medical Association
Osteopathic Physicians and
Surgeons of California

Fellow; American College of Osteopathic
Neurologists and Psychiatrists

Financial Disclosures

None

Objectives:

Understand

Understand the underlying mechanisms common to all psychotherapy

Review

Review the common attributes of effective psychotherapists

Review

Review the continuum of psychotherapeutic approaches

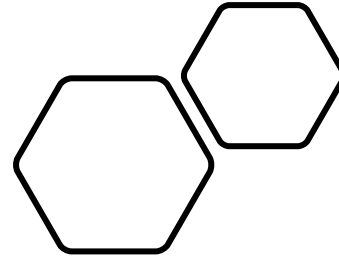

Understand

Understand the mechanisms of Minuchin Structural family therapy

What Is Therapy?

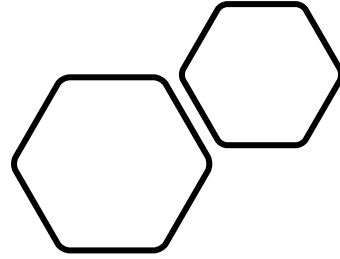

- Psychotherapy is a form of treatment aimed at relieving emotional distress and mental health problems.
- Involves examining and gaining insight into life choices and difficulties faced by individuals, couples, or families.
- Goal of improving some aspect of patient's life.
- Many types of treatment and is practiced by a range of clinicians using a variety of strategies.
- The critical aspect is the patient works **collaboratively** with the therapist and can identify improvement and positive change over time.

Continuum of Therapeutic Intervention

- Psychodynamic
- Patient-centered
- Solution-focused
- Skill-focused
- Cognitive-behavioral (CBT)
- Wrap around approaches (DBT)

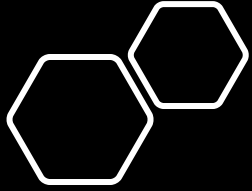

How Psychotherapy Works

- Presentation of the problem
- Evaluation of the problem
- Therapeutic intervention
- Cooperation with therapist's intervention
- Resolution of the presenting problem

Group Therapy Approaches

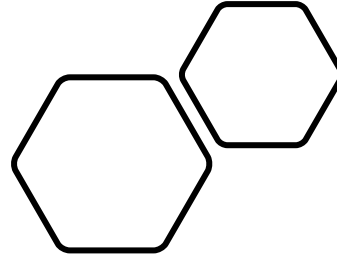

- Opportunity for in vivo experience in a safe setting
- Combination of individual and group approaches

Group Rules

- **Confidentiality-** *Anything said between any two or more group members at any time is part of the group and is confidential.*
- **Alcohol and Other Drugs-** *Group members cannot participate in the group under the influence of alcohol or other mind-altering drugs.*
- **Exclusive relationships-** *Dating and other exclusive relationships between or among group members are not a good idea.*
- **Gossip-** *Gossip and secret grudges can be very destructive in a group.*
- **Responsibilities-** *It is the group leader's responsibility to enforce these procedures and guidelines.*

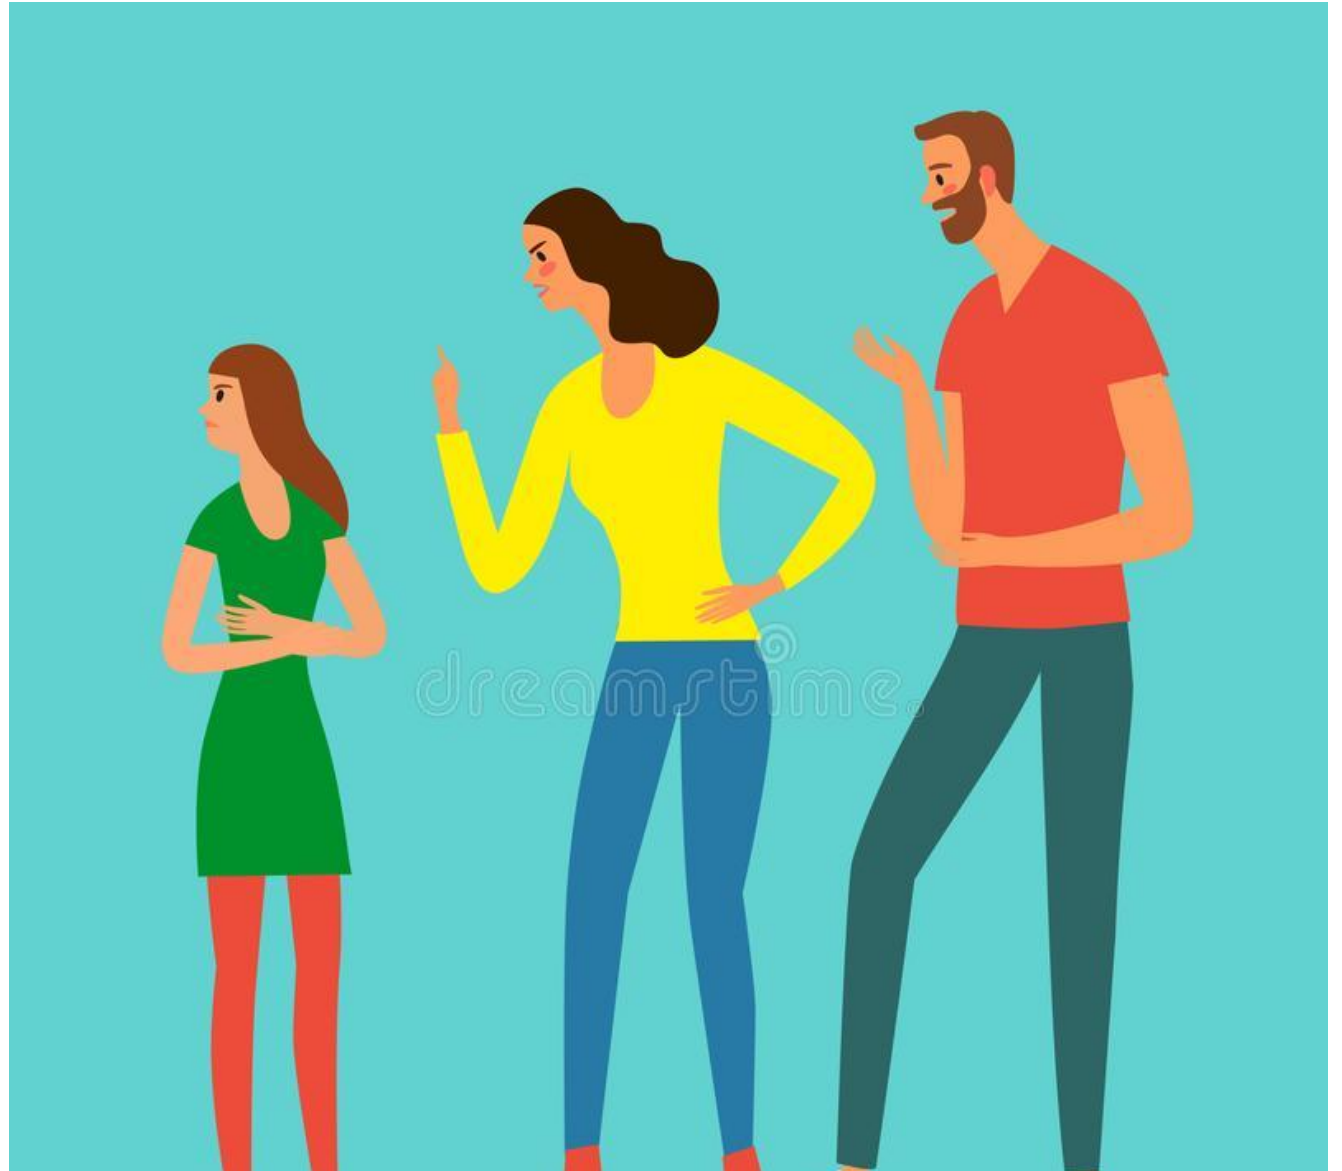

Minuchin Structural family therapy

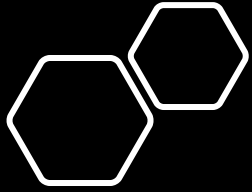

- **Salvador Minuchin** (October 13, 1921 – October 30, 2017)
- **Structural family therapy** addresses problems within a family by charting the relationships between family members, or between subsets of family.
- Application can be to groups.
- Charts diagram **power** dynamics as well as the **boundaries** between different subsystems.
- Changes of single behaviors (first-order changes).
- Alterations of the family's rules (second-order changes).
- Therapist tries to disrupt dysfunctional relationships within the family and cause them to settle back into a healthier pattern.

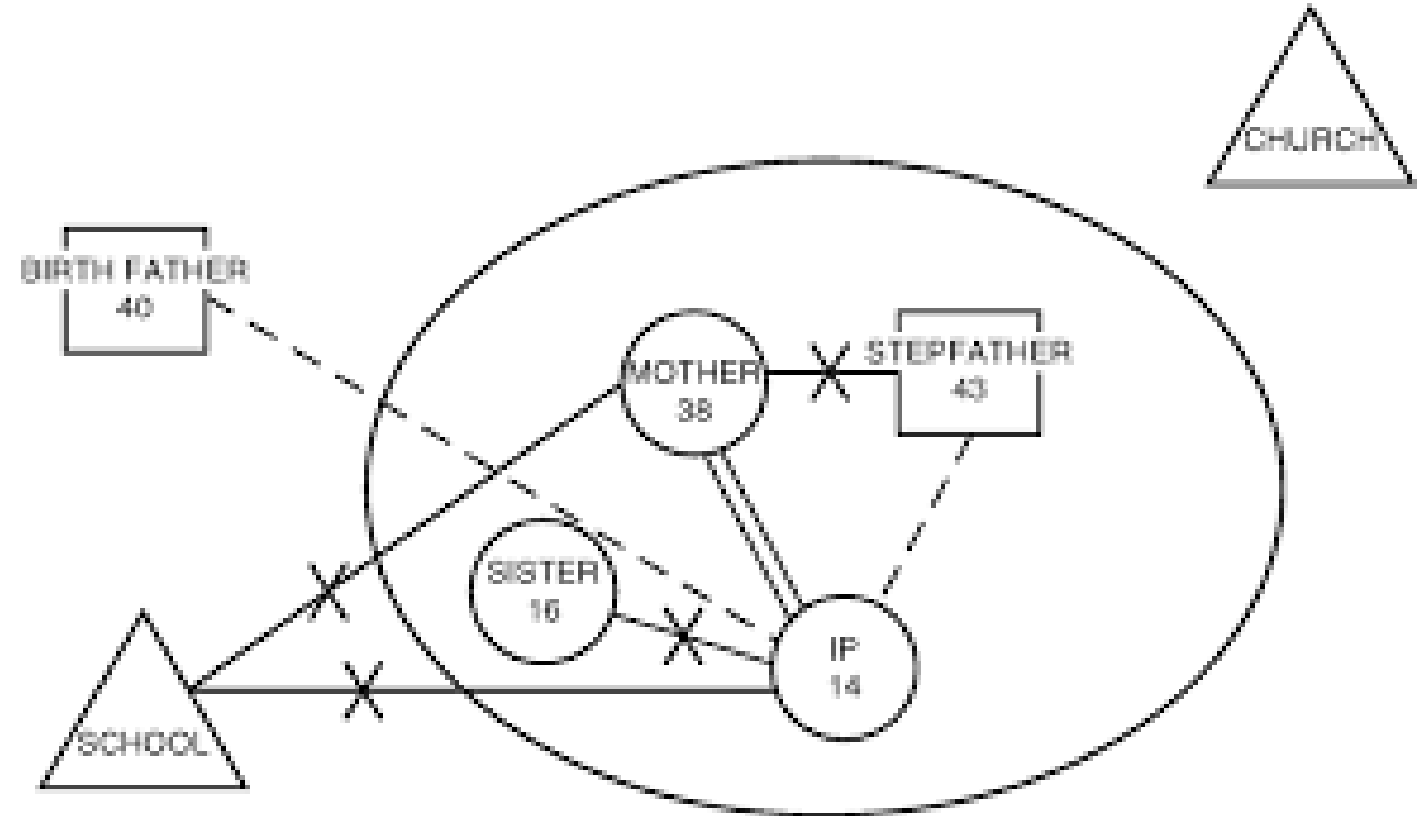

Example First Order Change

- Parent **“My daughter doesn’t ever agree with me.”**
- Child **“Yeah they don’t listen to me.”**
- Therapist *“Maybe you should have her arrested?”*
- Parent **“She hasn’t broken the law.”**
- Child **“I haven’t”**
- Therapist *“So, your daughter agrees with you, and she is listening.”*

Example of Minuchin Structural Chart

Theoretical premise for play

- Anna Freud (1928, 1964, 1965),
 - play transmits and communicates the child's unconscious experiences, desires, thoughts and emotions
- Margaret Lowenfeld (1935, 1970)
- Melanie Klein (1961, 1987)
 - stipulated that a child's spontaneous play was a substitute for the free association used within adult psychoanalysis

Play Therapy

- dynamic process between child and therapist in which the child explores at his or her own pace and with his or her own agenda those issues, past and current, conscious and unconscious, that are affecting the child's life in the present.
- child's inner resources are enabled by the therapeutic alliance to bring about growth and change.
- child-centred, in which play is the primary medium and speech is the secondary medium.

Play Defined

- promotes intrinsic vs extrinsic motivation
- process is more important than the end result
- can lose awareness of time and surroundings- reduces stress
- positive feelings are derived from and are a result of the play- promotes endorphins
- gives freedom to try out ideas. It promotes exploration, knowledge and confidence

Functions of Play

- reinforces the child's growth and development
- facilitate physical, emotional, cognitive, social, and moral development

Types of Play

- Physical play
- Manipulative play
- Expressive play
- Symbolic play
- Dramatic play
- Familiarization play
- Games
- Surrogate play

What therapists have in common

- Empathy
- Unconditional positive regard
- Ability to listen
- Affective connection-right hemisphere to right hemisphere

Effective interventions have in common

- Positive transference to therapist
- Awareness of counter-transference
- Predictable organization
- Sense of therapist as competent

Group Therapy

Group Therapy Approaches

- Opportunity for in vivo experience in a safe setting
- Combination of individual and group approaches

Couples Therapy

Couples Therapy

- Opportunity for in vivo experience
- Relationship as opposed to individual as intervention target

Family Therapy

Family Therapy

- Focus on relationships within the family
- Involves entire family...children and adults.
- May involve three generations as appropriate

Corrective Emotional Experience

Corrective Emotional Experience

- Contradicts important aspects of the person's experience
- May be specifically therapeutic

Dialectical Behavior Therapy (DBT)

- Designed to treat patients with Borderline Personality Disorder
- Two Components:
 - Individual – discussion of current issues
 - Group – skill oriented – four modules
 - Mindfulness
 - Interpersonal effectiveness
 - Emotional regulation
 - Stress tolerance

Solution Focused Therapy

- Problem solving in a matter of fact manner
- Identifies problem
- Suggest solutions

Dynamic Psychotherapy

- Focuses on Relationship with Therapist
- Attempts to understand the patient's dynamics
- Transference and Countertransference are important
- Psychoanalysis vs. Conventional Psychotherapy

Basic Assessment Principles

- Psychological assessment is useful to the extent that it helps treaters make the decisions and provide the services that their work demands
- “The evidence indicates that clinicians who use a single method to obtain patient information regularly draw faulty conclusions.” (Meyer et al., 2001, p. 150).

Why family needs to be involved.

Non-test correlations Meyer et al. (2001)

- Batting average and hit success - .06
- Post-high-school grades and job performance - .16
- Movie critics and box-office gross - .17
- Employment interviews and job success - .20

Test correlations

Meyer et al. (2001)

- Hare Psychopathy Checklist and criminal recidivism - .28
- Rorschach scores and conceptually meaningful criteria - .35
- Pap smear and cervical abnormalities - .36
- MMPI validity scales and under-reported psychopathology - .39
- PSA and estimated detection of prostate cancer in 60-70 year-olds - .40

Components of Multimethod Psychological Assessment

- Clinical Interview
- Observation
- Review of records
- Other observers
- Testing

Common Psychological Tests

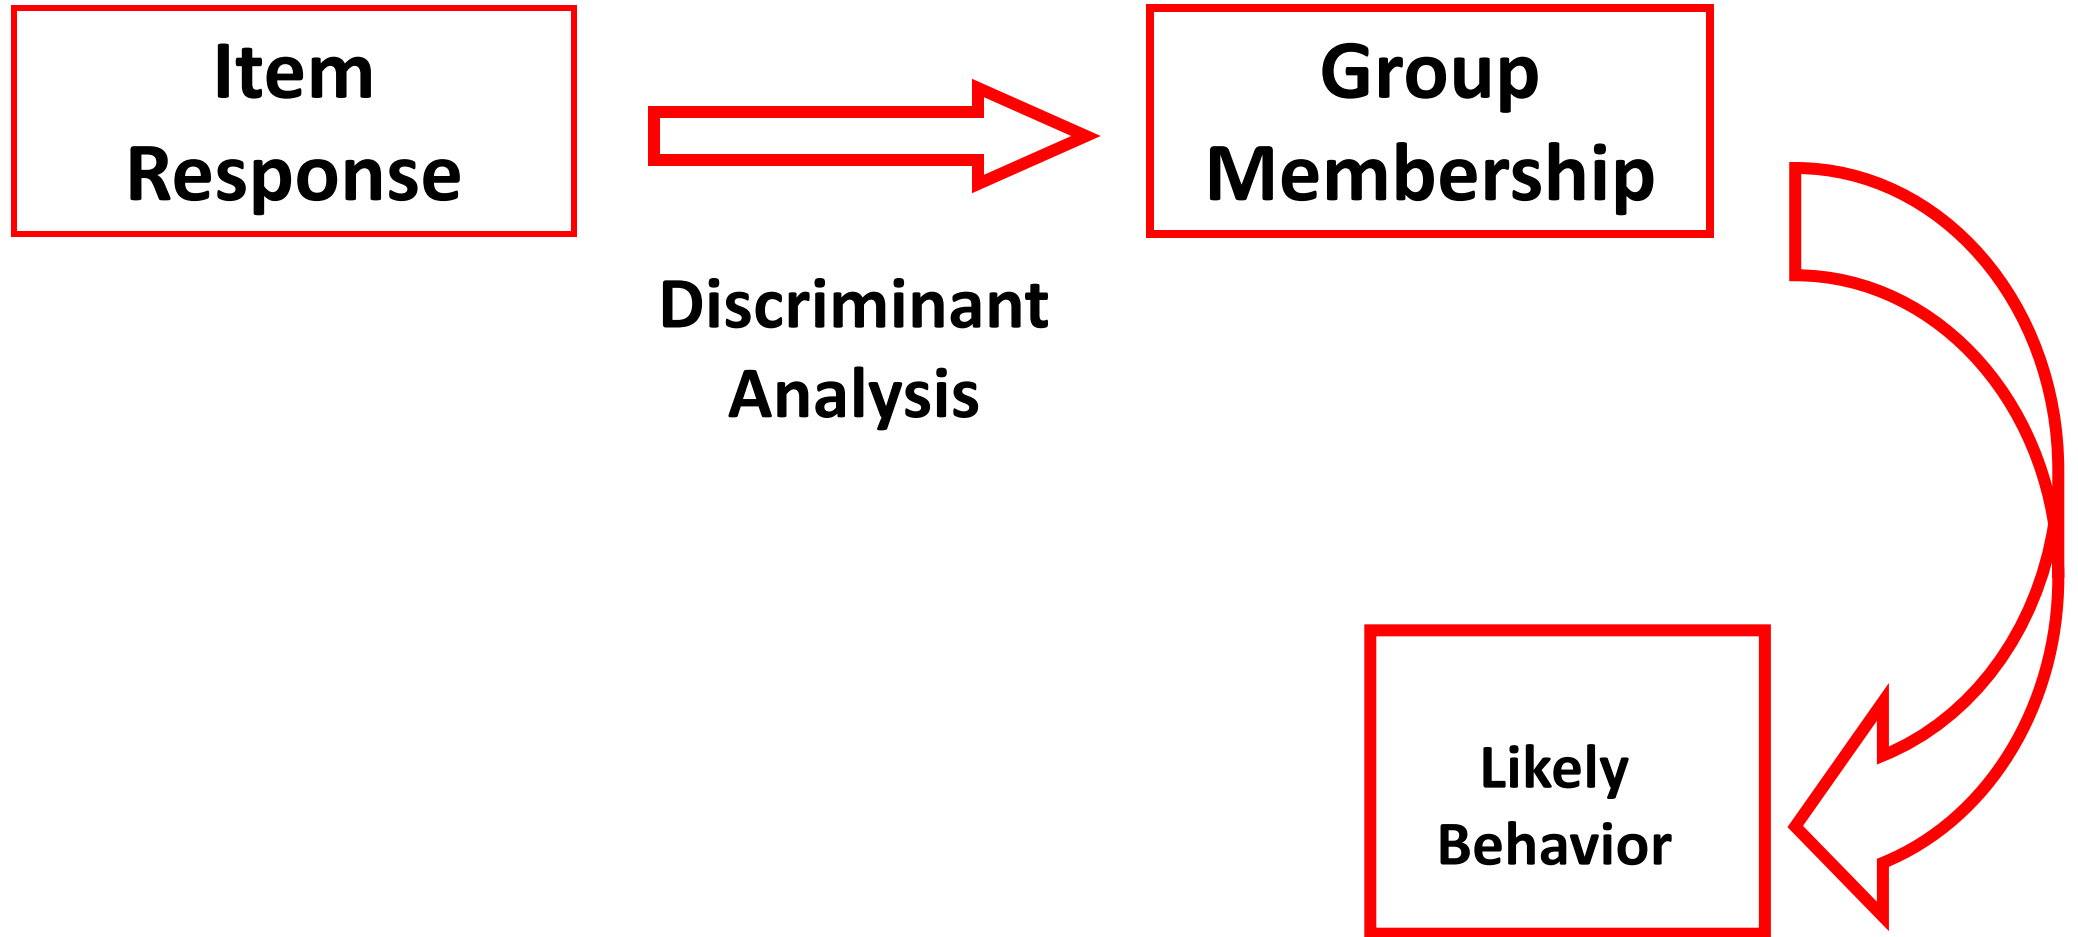

- Projective measures (performance-based)
 - Rorschach
 - Thematic Apperception Test (TAT)
 - Incomplete Sentences Blank (ISB)
 - House-Tree-Person Test (HTP)
 - Kinetic Family Drawing Test
- Objective Measures (self-report)
 - Minnesota Multiphasic Personality Inventory (MMPI)
 - Personality Assessment Inventory (PAI)
 - Millon Clinical Multiaxial Inventory (MCMI)
 - Beck Depression Inventory
 - Mini Mental Status Examination (MMSE)
 - Montreal Cognitive Assessment (MoCA)
