

Objectives:

At the end of this lecture, students will:

1. Understand, describe, and differentiate between the different learning theories, including:
 - Behaviorism
 - Cognitivism
 - Constructivism
 - Piaget's 4 stages of cognitive development
 - Bloom's Taxonomy
 - Erikson's Stages of Psychosocial development
2. Understand Basic Concepts of learning theory including:
 - Learning
 - Stimulus
 - Response
 - Motivation
 - Reinforcement (Schedules of reinforcement)
 - Punishment
 - Stimulus Generalization
 - Extinction
 - Psychomotor learning
 - Desensitization
 - The Peter Principle
3. Understand The different Types of Learning, including:
 - Classic (Pavlovian) Conditioning
 - Unconditioned Stimulus (US)
 - Unconditioned response (UR)
 - Conditioned Stimulus (CS)
 - Conditioned Response (CR)
 - Operant Conditioning
4. Understand Clinical Applications
 - Understand Physician-Patient Interactions
 - Understand Token Economies

- Understand Systematic Desensitization
- Become comfortable in being able to differentiate between Classical and Operant Conditioning
