

▪ **Checklist for the Upper Extremity Integrated Exams**

▪ **Shoulder**

▪ **Inspect-**

- erythema, edema, displacement warmth, muscle atrophy, positioning at rest, posture

▪ **Palpate/ TART**

- SC, clavicle, AC, coracoid, head of humerus, bicipital groove, subacromial bursa, scapula, supraspinatus, infraspinatus, teres major and minor, subscapularis, latissimus, rhomboids, trapezius, deltoid, levator scapulae

▪ **Vascular/Lymphatics:**

- pectoral, subscapular, humeral, central, apical, infra-clavicular lymph nodes
- pulses: radial/ulnar

▪ **Neuro Exam (nerve root vs peripheral nerve):**

- Strength (myotomes)
- Sensation (dermatomes)
- Reflexes
- Special tests (spurlings, hoffman's)

▪ **Active (both arms) & passive (dysfunctional side) ROM, Strength Testing (dysfunctional side)-**

- Internal Rotation, External Rotation, Abduction, Adduction, Flexion, Extension, circumduction, scapulothoracic ROM (protraction, retraction, depression, elevation, upward rotation)
- You should also evaluate the joint above and below (elbow)

▪ **Somatic Dysfunction of the Shoulder- Glides and slides:**

- **Scapulothoracic**
 - Rotation
 - Elevation
 - Depression
 - protraction/retraction
- **SC by springing and motion:**
 - superior/inferior- shoulder shrug
 - anterior/posterior glide- protraction/retraction
 - anterior/posterior rotation
 - **AC, springing and motion:**
 - AC inferior glide with Abduction
 - AC superior glide with Adduction
 - AC rotation (anterior/posterior) with IR/ER of the humerus,
- **Glenohumeral**
 - Anterior/posterior glide and superior/inferior glide short lever OR
 - Long lever
 - Humeral Abduction = Inferior glide
 - Adduction = Superior glide
 - Humeral Internal rotation = Posterior glide
 - External rotation = Anterior glide

- **Special tests**
 - Apley Scratch, Neer, Hawkins, Drop arm, empty can, glenohumeral traction-sulcus sign, speeds, scarf sign, Yearguson, apprehension, lift off test, Adson's
 - **ABC's of the shoulder**
 - Autonomics-T1-T4 TART
 - Biomechanics- as per the glides and slides
 - Circulation- pectoral region, thoracic inlet, diaphragm
 - Screening- scoliosis, Mitchell model, upper crossed, Zink, posture, mood
-

Elbow/Wrist

- **Inspect:**
 - warmth, edema, erythema, tenderness, joint deformity, alignment shoulder orientation, carrying angle, varas/valgus deformity (wrist/elbow)
- **Palpation/ TART**
 - Elbow
 - Olecranon, radial head, medial/lateral epicondyle, medial/lateral collateral ligaments, wrist flexor attachment (medial epicondyle), wrist extensor attachment (lateral epicondyle), supinator, pronator, IOM, cubital tunnel
 - Wrist
 - distal radius and ulna, scaphoid, lunate, triquetrum, pisiform, trapezoid, trapezium, capitate, hamate, metacarpals, phalanges, carpal tunnel, wrist and finger flexors and extensors, thenar/hypothenar eminence
- **Vascular/Lymphatic:**
 - supratrochlear lymph nodes
 - radial/ulnar artery, Allen's test
- **Neuro Exam (nerve root vs peripheral nerve):**
 - strength,
 - Sensation
 - Reflexes
 - special tests- (spurlings, Hoffmans)
- **Active ROM (both sides), Passive ROM (dysfunctional side), Muscle Strength Testing (dysfunctional side)**
 - Elbow
 - Flexion, Extension, pronation/supination
 - Wrist/Fingers
 - flexion, extension, radial deviation, ulnar deviation, circumduction, flex and extend fingers, abduct and adduct fingers, thumb opposition
 - You should also assess the joint above and below
- **Somatic dysfunction of the Elbow and Wrist (glides & slides)**
 - Elbow
 - **Ulnohumeral Joint**- Abduction/Adduction (medial/lateral glide)

- **Radial head**-Posterior-pronation/Anterior supination
 - Wrist
 - **Radiocarpal**: glides flexion/extension, radial/ulnar deviation
 - **Distal radioulnar**: A/P glide,
 - **Carpals**: springing of carpals, A/P glide
 - **MCP/PIP/DIP**: medial/lateral glide, A/P glide, IR/ER
- **Special tests**
 - Elbow
 - Resisted pronation/ supination, Resisted wrist flexion/ wrist extension
 - Wrist
 - Palpation of snuff Box, Phalen/Reverse phalen, Tinel- carpal tunnel, guyon's canal, cubital tunnel, Finkelsteins
- **Somatic dysfunction- The ABC's**
- **Autonomics-T1-4**
- **Biomechanics**-as per the glides and slides
- **Circulation**-Antecubital fossa, pectoral region, thoracic inlet, diaphragm
- **Screening**: Mitchell Model, Upper Crossed considerations, Posture, Zink, Mood
