

**CNS AND PNS TUMORS
CLINICAL, RADIOLOGIC, AND PATHOLOGIC FEATURES**

OBJECTIVES AND EXPECTED LEARNING OUTCOMES:

1. Know the common clinical presentation of CNS tumors
2. Know the common types of CNS tumors
3. Know the preponderance of types of CNS tumors presenting in pediatric versus adult age groups.
4. Know the classification and grading schemes for CNS tumors and their Significance
5. Describe the characteristic clinical and morphologic features of gliomas
 - a. Astrocytomas:
 - Pilocytic astrocytoma
 - Fibrillary astrocytoma
 - Glioblastoma multiforme
 - b. Oligodendroglioma
 - c. Ependymoma
6. Describe the characteristic clinical and morphologic features of PNETs (e.g. medulloblastoma)
7. List the neuronal tumors in the nervous system
8. Describe the characteristic clinical and morphologic features of germ cell tumors in the CNS
9. Describe the characteristic clinical and morphologic features of primary CNS lymphomas
10. Describe the characteristic clinical and morphologic features of meningiomas
11. Describe the general features of metastatic tumors to the brain
 - a. Direct and localized effects
 - b. Paraneoplastic syndromes
12. Know the inheritance pattern and list the most commonly occurring neoplasms in familial tumor syndromes
 - a. Type 1 and 2 neurofibromatosis - autosomal dominant
 - b. Tuberous sclerosis – autosomal dominant
 - c. von Hippel-Lindau – autosomal dominant
13. Describe the characteristic clinical and morphologic features of benign and malignant tumors and tumor-like lesions of the peripheral nerve
 - a. Schwannoma
 - b. Neurofibroma
 - c. Malignant peripheral nerve sheath tumor
 - d. Traumatic neuroma

READING ASSIGNMENT:

Robbins Basic Pathology 11th ed.; Chapter 21: Central Nervous System and Eye: Tumors.
