

Student 1 _____ (SHOULDER)

Objectives of testing		
1. SD will be able to perform a full examination of the shoulder OR knee. They should expect to be assigned to one or the other joint at the start of the BSA. 2. After the full examination is complete the SD will be asked to perform two sets of orthopedic special tests related to the joint assigned by faculty. 3. For those special tests SD will: • Demonstrate the named technique (PERFORMED BILATERALLY- affected joint first) • Indications: ex) a patient hx or physical exam findings that can be further examined with special test. • Explain what a positive finding is for that test • Explain the clinical significance of a positive finding 4. SD will need to score 3.5 out 5 on rubric to meet expectations (70%). If not, the student will be re-tested on the same exam after receiving feedback.		
Shoulder: Examines shoulder in detail also general examination of neck and elbow (joint above and below)		
Faculty says: Patient presents with right sided shoulder pain: Inspection	Observes both upper extremities. Verbalizes inspection for: (at least 4: joint deformity, effusion/edema, ecchymosis, erythema, atrophy of muscles (deltoid, and around scapula)	Meets Expectations: (0.5 points total) <i>(verbalizes at least 4 finding they are looking for on inspection)</i>
Palpation	Student assesses bulk and tone of the upper extremities Student palpates shoulder, neck, elbow (affected side first, then normal side, asks PT if they have tenderness) Manubrium to length of clavicle to AC joint, palpation under AC joint , bicipital groove, lateral shoulder to scapula (spine of scapula) Palpates over posterior cervical spinous processes and paraspinal muscles of neck and asks if tender. Palpates over elbow and asks if tender.	Meets expectations: (1 point total) Bulk/Tone (0.25 point) Palpates shoulder landmarks (0.5 points) Palpates neck and elbow (0.25 points) -needs to palpate neck AND elbow for points

Range of Motion	Tests Active ROM at Shoulder: -Flexion/Extension -Abduction/Adduction -Internal rotation/External rotation. Performs Active ROM at Cervical Spine: -neck flexion, extension, sidebending, rotation Elbow: -flexion, extension -pronation, supination.	Meets expectations: (0.5 points) Performs active ROM at Shoulder (0.25) Cervical spine and elbow (0.25) -Needs to test neck AND elbow for points
Strength	Tests strength at shoulder and elbow <u>Shoulder:</u> abduction <u>Elbow</u> flexion/extension	Meets expectations: (0.5 total) Demonstrates all strength testing with good placement of hands for <u>bracing</u>. Shoulder (0.25) Elbow (0.25)
Neurovascular exam	SD reports indication of neurovascular exam IF there are signs of : Paresthesias, poor circulation, weakness, muscle atrophy. What is the exam: Sensation (dermatome) Pulses (radial) Reflexes for Upper extremity	Meets expectations: (0.5 total) Verbalizes what they might evaluate from H&P and what examinations they would do.
Shoulder Special test (choose 2 of the 3 large boxes)		
Faculty SAYS Patient reports R shoulder pain with shoulder flexion and abduction. You suspect subacromial shoulder impingement SD should know to perform the following tests: Neers Test: Hawkins Test:	1. Indications 2. Demonstration 3. What is a positive exam and what does the clinical finding suggest?	Meets Expectations: (1 point total, 0.5 each test) For both tests, performs 1-3 performs on affected side then unaffected side. Neers: 0.5 point No points if 1 2 or 3 incorrect Hawkins: 0.5 point No points if 1 2 or 3 incorrect
Faculty SAYS: Patient reports pain at AC joint on right with palpation. SD should perform the following tests: Cross over test:	1. Indications 2. Demonstration 3. What is a positive exam and what does the clinical finding suggest?	Meets Expectations: (1 point) For both tests, performs 1-3, performs on affected side then unaffected side. Crossover: 0.5 point

STUDENT 1: SHOULDER	Score: ____/5 points
Needs to score 3.5 or higher to meet expectations	Meets expectations
Comments/Feedback	Misses expectations

_____ **Meets minimal competency to progress**

_____ **Refer to Fellows**

Student 2: _____ (KNEE)		Faculty: _____
KNEE: Examines knee in detail also general examination of hip and ankle (joint above and below)		
Patient presents with left knee pain: Inspection	Exposes bilateral lower extremities. Verbalizes observation for: (atleast 4: joint deformity, effusion/edema, ecchymosis, erythema, atrophy of muscles) Discusses need to perform brush test on left knee if effusion is present to confirm if within joint capsule	Meets expectations: (1 point total) <i>(verbalizes at least 4 finding they are looking for on inspection) (0.5 points)</i> Verbalizes what they would do if there was a knee effusion (0.5)
Palpation	BILATERALLY Student assesses bulk and tone of the lower extremity Knee: palpate popliteal fossa, along tibial joint line, patella lateral facets, quadriceps tendon, patella ligament,and pes anserine bursa. Palpates hip generally and ankle generally	Meets expectations: (1 point total) Bulk/Tone (0.25 point) Palpates knee landmarks (0.5 points) Palpates hip AND ankle (0.25 points) no points if misses one.
Range of Motion	Active ROM: Squat test (assists if patient needs) Knee -Flexion/extension Repetitive but important to evaluate isolated.	Meets expectations: (0.5 points) Performs squat test (0.25) Tests Active ROM at knee (0.25)
Strength	Tests strength at Hip -flexion/extension -Abduction/adduction Knee -Flexion/extension Ankle -Dorsiflexion/plantar flexion	Meets expectations: (0.5 total) Demonstrates all strength testing with good placement of hands for <u>bracing.</u> Knee(0.25) Hip/Ankle (0.25) need to do both Hip AND ankle to get points

Neurovascular exam	Reports they will perform a neurovascular exam IF: Patient reports Paresthesias, weakness OR on exam there is, poor circulation, weakness, muscle atrophy. What is the exam: Sensation (dermatomes) Pulses (DP, posterior tibialis) Reflexes for Lower extremity	Meets expectations: (0.5 total) Verbalizes what they might evaluate from H&P and what examination they would do.
Special Knee Tests (pick 2 of the 3 sets)		
Faculty SAYS: Your patient has a positive brush test for effusion please evaluate the ACL SD should perform the following tests: Anterior Drawer Test	1. Indications 2. Demonstration 3. What is a positive exam and what does the clinical finding suggest?	Meets Expectations: (1 point total, 0.5 each test) For both tests, performs 1-3 performs on affected side then unaffected side. Anterior Drawer: 0.5 point <i>No points if 1 2 or 3 incorrect</i>
Lachmans's test	1. Indications 2. Demonstration 3. What is a positive exam and what does the clinical finding suggest?	Lachmans: 0.5 point <i>No points if 1 2 or 3 incorrect</i>

Faculty SAYS: Your patient has a positive brush test for effusion, please evaluate for meniscus involvement. SD should perform the following tests: McMurrays test	1. Indications 2. Demonstration 3. What is a positive exam and what does the clinical finding suggest?	Meets Expectations: (1 point total, 0.5 each test) For both tests, performs 1-3 performs on affected side then unaffected side. McMurray: 0.5 point <i>No points if 1 2 or 3 incorrect</i>
Bounce Home test	1. Indications 2. Demonstration 3. What is a positive exam and what does the clinical finding suggest?	Bounce Home: 0.5 point <i>No points if 1 2 or 3 incorrect</i>

Faculty SAYS: Please examine the medial and lateral stability of the knee: Knee varus stress test @30 degrees	1. Indications 2. Demonstration 3. What is a positive exam and what does the clinical finding suggest?	Meets Expectations: (1 point total, 0.5 each test) For both tests, performs 1-3, performs on affected side then unaffected side. Varus test 0.5 point <i>No points if 1 2 or 3 incorrect</i> Valgus test: 0.5 point <i>No points if 1 2 or 3 incorrect</i>
Knee valgus stress test @30 degrees	1. Indications 2. Demonstration 3. What is a positive exam and what does the clinical finding suggest?	

STUDENT 2: KNEE	Score: ____/5 points
Needs to score 3.5 or higher to meet expectations	Meets expectations
Comments/Feedback	Misses expectations

_____ **Meets minimal competency to progress**

_____ **Refer to Fellows**
