

Musculo-Skeletal Infections-Part 1

Learning and Testable Objectives

Faculty-Dr. Pai

BUG LIST FOR MSK INFECTIONS (FOR MICROBIOLOGY EXAM)

Bacteria	Parasites	Fungi
<i>Staphylococcus aureus and epidermidis</i>	<i>Trichinella spiralis</i>	<i>Candida</i>
<i>Pseudomonas</i>	<i>Taenia solium</i> - Cysticercosis	
<i>Salmonella</i>		
<i>Neisseria gonorrhoeae</i>		
<i>Borrelia burgdorferi</i>		
<i>Streptococcus pyogenes</i> (GAS)		
<i>Clostridium perfringens</i>		
<i>Clostridium tetani</i>		

Learning Objectives for MSK Infections 1 A (**Bone and Joint infections**) and 1B (**Muscle Infections**)

1. List the major pathogens of osteomyelitis, arthritis and myositis
2. Describe the routes of infection
3. For the specific etiologic agents of musculoskeletal infections, discuss pertinent characteristics:
 - Morphological and cultural characteristics
 - Reservoir and/or source
 - Transmission and relevant epidemiology
 - Pathogenesis and virulence factors
 - Disease association and complications
 - Laboratory Diagnosis
 - Treatment, Prevention
