

Student Doctor:

Faculty Proctor:

Station 1: UE COAR, LE COAR

Perform one technique below after using and appropriate diagnosis.

Techniques	Diagnosis
Supine Pectoral Muscle Stretch	Pectoral muscle hypertonicity
Supine Latissimus Dorsi and Teres Major Stretch	Latissimus dorsi and teres major hypertonicity
Scapular BLT, Unilateral or Bilateral	Shoulder abduction or palpation of the appropriate region
Pronated or Supinated MET	Forearm pronation/supination
Radiocarpal MET	Wrist flexion/extension and abduction/adduction
Carpal Tunnel Release ST	Myofascial restriction
Popliteal Fossa Release	Popliteal fossa TART
Plantar Fascia Release	Planter fascia TART
Arch Springing	Planter fascia TART
IR/ER of Tibia MET	Tibia IR/ER
Ankle plantar/dorsiflexion MET	Ankle plantarflexion/dorsiflexion

1. Efficient SD/patient biomechanics		2	1	0
2. Assessed appropriately for given treatment (1 for correct assessment, 2 for accurate dx)	3	2	1	0
3. Accurate anatomic contact			1	0
4. Palpatory contact (pressure, gentle, thoughtful)		2	1	0
5. Treatment execution (at barrier/ease/balance point, forces appropriate, process correct)	3	2	1	0
6. Effectiveness (creates change in tissues)			1	0
7. Reassess (change during treatment vs repeat initial assessment)			1	0
8. Overall understanding/efficiency			1	0

Deducted Points for Prompting -2 -1

Station 1 Total ____/14

Station 1 Communication (ICS)

3 2 1 0

Communicates in proper non-physician language to partner (1 point), communicates in proper physician language to proctor (1 point), and asks consent before starting (1 point).

Comments:

Station 2: Facilitated Positional Release (FPR), LBP COAR

Perform one technique below after using an appropriate diagnosis.

Techniques	Diagnosis
Cervical FPR – Superficial Muscles	Hypertonicity – SCM, scalenes, suboccipitals, rectus capitus etc
Cervical FPR	Cervical Segmental Triplanar
Thoracic FPR – Upper (T1-T4)	Thoracic Segmental Triplanar
Thoracic FPR – Lower (T5-T12)	Thoracic Segmental Triplanar
Lumbar FPR – Lateral Recumbent	Lumbar Segmental Triplanar
Still Technique - First Rib	Inhalation/exhalation and springing for elevated rib b/l
Iliolumbar Ligament BLT	Iliolumbar ligament tenderness or tension
Sacral Segmental BLT	Tenderness or restricted motion at sacral segments OR sacral springing
Seated Still Technique for Lumbars	Lumbar Segmental Triplanar OR SI restriction
Iliopsoas FPR	Hypertonic lumbar paraspinals or psoas

1. Efficient SD/patient biomechanics		2	1	0
2. Assessed appropriately for given treatment (1 for correct assessment, 2 for accurate dx)	3	2	1	0
3. Accurate anatomic contact			1	0
4. Palpatory contact (pressure, gentle, thoughtful)		2	1	0
5. Treatment execution (at barrier/ease/balance point, forces appropriate, process correct)	3	2	1	0
6. Effectiveness (creates change in tissues)			1	0
7. Reassess (change during treatment vs repeat initial assessment)			1	0
8. Overall understanding/efficiency			1	0

Deducted Points for Prompting -2 -1

Station 2 Total ____/14

Station 2 Communication (ICS)

3 2 1 0

Communicates in proper non-physician language to partner (1 point), communicates in proper physician language to proctor (1 point) and asks consent before starting (1 point).

Comments:

2025 OPP3 BLOCK 3 PRACTICAL EXAM

Overall Performance:
☐ Leading (5): In addition to an integrated and fluid performance, student demonstrates exceptional thoughtfulness and skill in performance
☐ Strong (4): Integrated and fluid performance
☐ Solid (3): Somewhat integrated and fluid performance
☐ Building (2): Demonstrates understanding of basic concepts, but performance is not integrated or fluid
☐ Not meeting expectations (1): not demonstrating understanding of concepts, not well-practiced
☐ Not prepared (0)

Station 1 Subtotal: __/14

Station 2 Subtotal: __/14

Overall: __/5

Total: __/33

Communication: __/6
